Arm kits

There are many upgrades around for the Rega arms, but they concentrate on re-wiring or changing the counterweight. This kit TOTALLY REBUILDS the arm. The only original components left are the armtube, arm lift and arm rest.

The kit has all the parts necessary for a complete structural rebuild without special tools or workshop equipment. It does require you to totally dismantle the arm, and this is NOT REVERSIBLE. Because your new arm can be dismantled and adjusted, rewiring is much easier than with a standard arm.

The kits come as complete sub-assemblies and require you to mount the arm tube and then complete it with your choice of wire.

Details of the build process are available here:

<http://www.audiomods.co.uk/armbuild.pdf>

and full details of the arm design and construction here:

<http://www.audiomods.co.uk/regaNots2.pdf>

Micrometer kits add on-the-fly vta adjustment. Base, bearings and arm yoke are assembled ready for the arm tube.

Audiomods Rega conversion

Arm tube	Suitability	Comments
RB250	Yes	Older arm tubes have thinner walls than the latest ones. The best choice for high-compliance cartridges. Some have casting marks that are difficult to remove
Goldring GR1	Yes	Arm tube as the RB250
RB251	Yes	New, thicker arm tube casting. Better finished than the originals. Extra mass makes it the best all-round choice.
RB300	No	The bearing journal is 12mm rather than the 13mm of the other arms. The kit does not fit.

Prices	
Standard kit	£215
Micrometer kit	£295

Delivery charge: UK £9, Europe £12, Rest of the World £18

Payment: by Paypal or sterling cheque when the arm is ready to ship.

No deposit needed.

Delivery time: 3-4 weeks
