

Audiomods Classic II tonearm

A new model at a very special price

The original Classic arm has proven exceptionally popular with owners who want to get the most performance for their money.

The Classic II builds on this by incorporating the new generation Rega 303 arm tube and features from the Audiomods Series Five arms which make for a real performance upgrade over the original.

Previously optional features – alloy arm rest and stainless vta lock – are now standard, resulting in a package that is actually a saving over the original.

If you have a budget but don't have the tools or skills to build up an Audiomods arm from a kit, this is the ideal solution: a complete, ready-to-play Audiomods arm with performance that has been reviewed against arms of four times the price and one that won't be out of place with some of the most exotic turntables and cartridges.

The Classic is built to the same standard as the Series Five arms and uses new Rega factory parts for the arm tube and arm lift with every other component machined from solid billet. Each hand-made arm is individually numbered for the owner and comes with comprehensive instructions and setup tools.

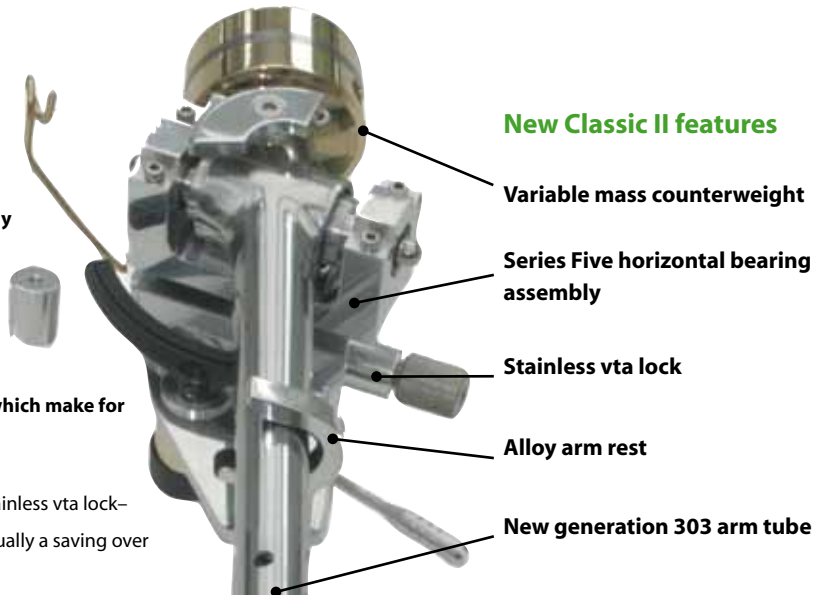

Complete wiring loom

The wiring loom is a single run of Cardas 33g wire from the Michell silver-plate cartridge tags to the KLE Eichmann bullet RCAs, wired in a "pseudo-balanced" configuration in the same way as the Series Five arms, with a separate ground connection, and a screened 0.9m interconnect section. This is an extra-flexible cable, particularly suited to suspended turntables.

Options

Headshell shim kit For a perfect match to some moving coil cartridges you may want to add a headshell mass shim.
Set of three shims. **£20**

Audiomods Classic II tonearm

Classic II micrometer tonearm

“ The Audiomods Classic II should be at the top of the list for anyone shopping for an affordable tonearm. ”

“ ... it stands head and shoulders above any other arm in this price range. ”

**John Hoffman,
Positive Feedback review**

The Classic II micrometer arm features the same updates as the standard version and adds the Series Five micrometer assembly for precise, calibrated vta adjustment.

The micrometer makes initial setup quicker and allows you to return exactly to any previous setting. One full turn equals 0.5mm of vta adjustment

Ordering – direct sale only

Each arm is hand-built to order with a delivery time of 3-4 weeks, optimised for your choice of cartridge(s) and is available only on direct sale from the address below. Arms are built to individual order with a delivery time of 3-4 weeks.
